

# Internationalisation of regional clusters

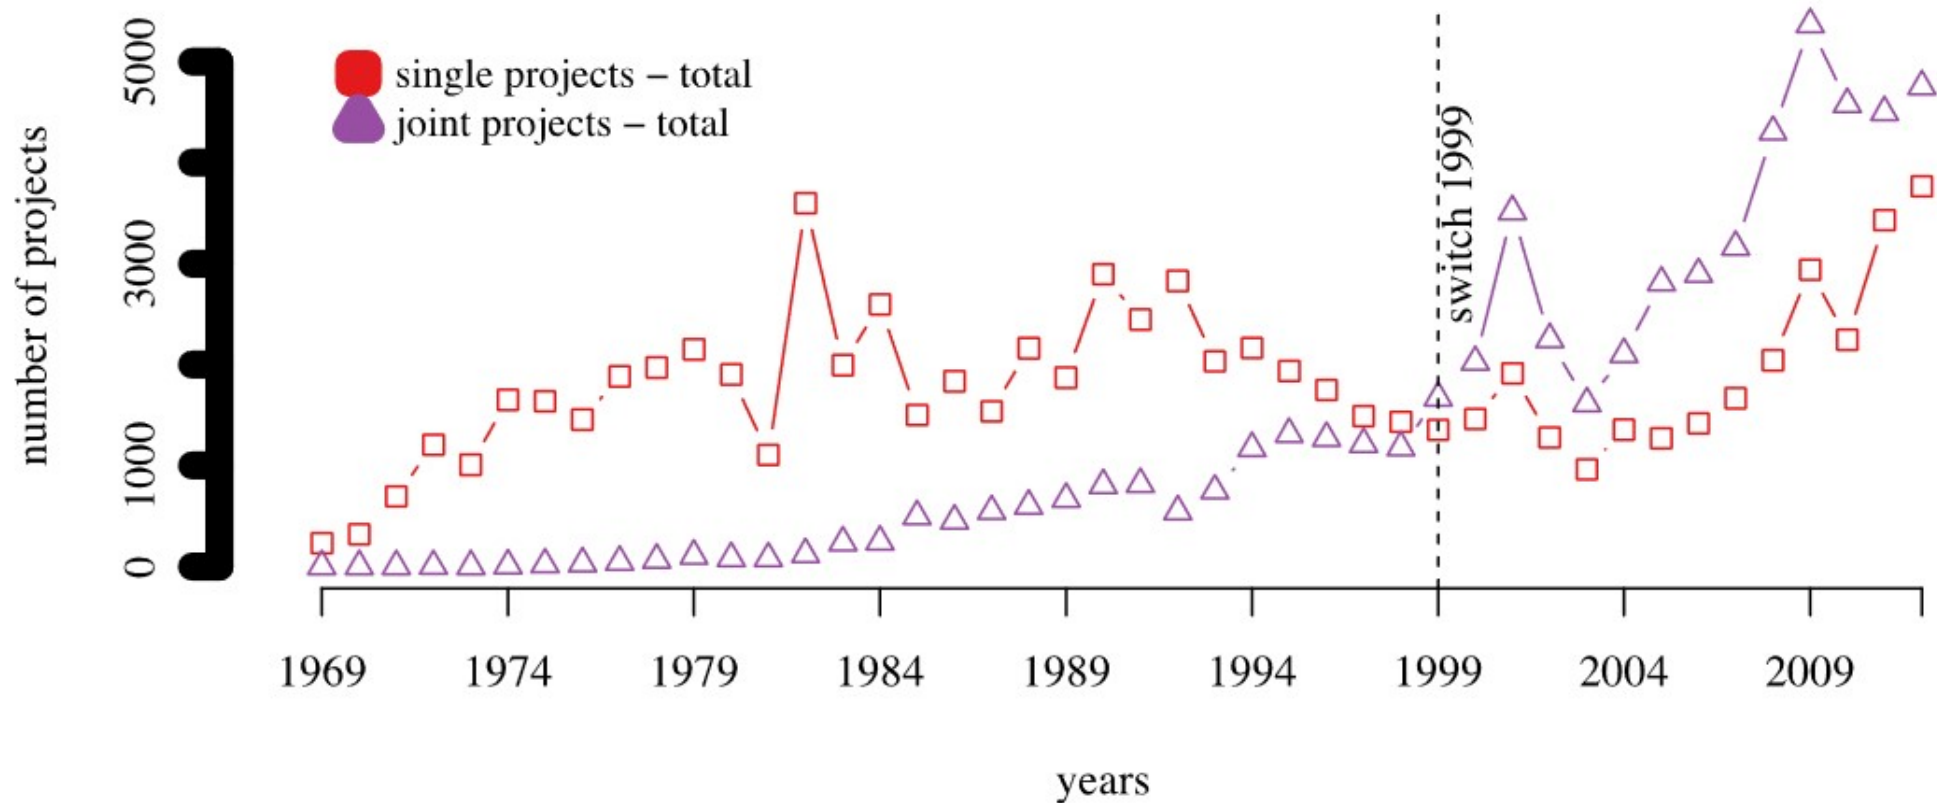

An example based on InterSpin

Dr. Nils Grashof

Chair of Microeconomics

Friedrich-Schiller-University Jena

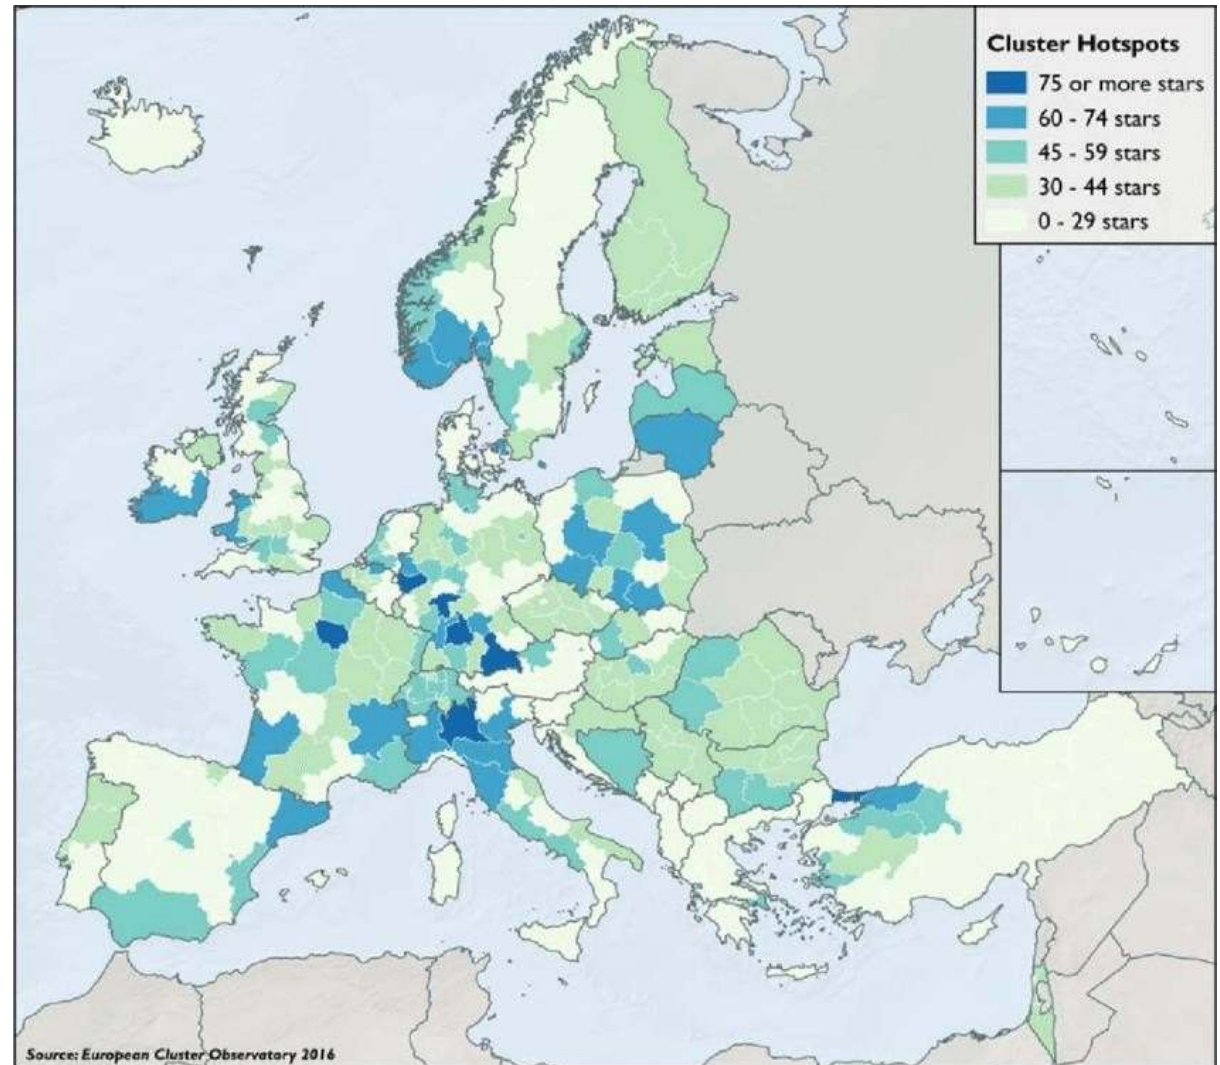

# Policy interest in cooperative R&D

# LOCALIZATION

# Regional clusters – A economic reality

- Regional clusters (...)
  - employ nearly 40% of the European workforce
  - account for 55% of European wages (European Union, 2016)

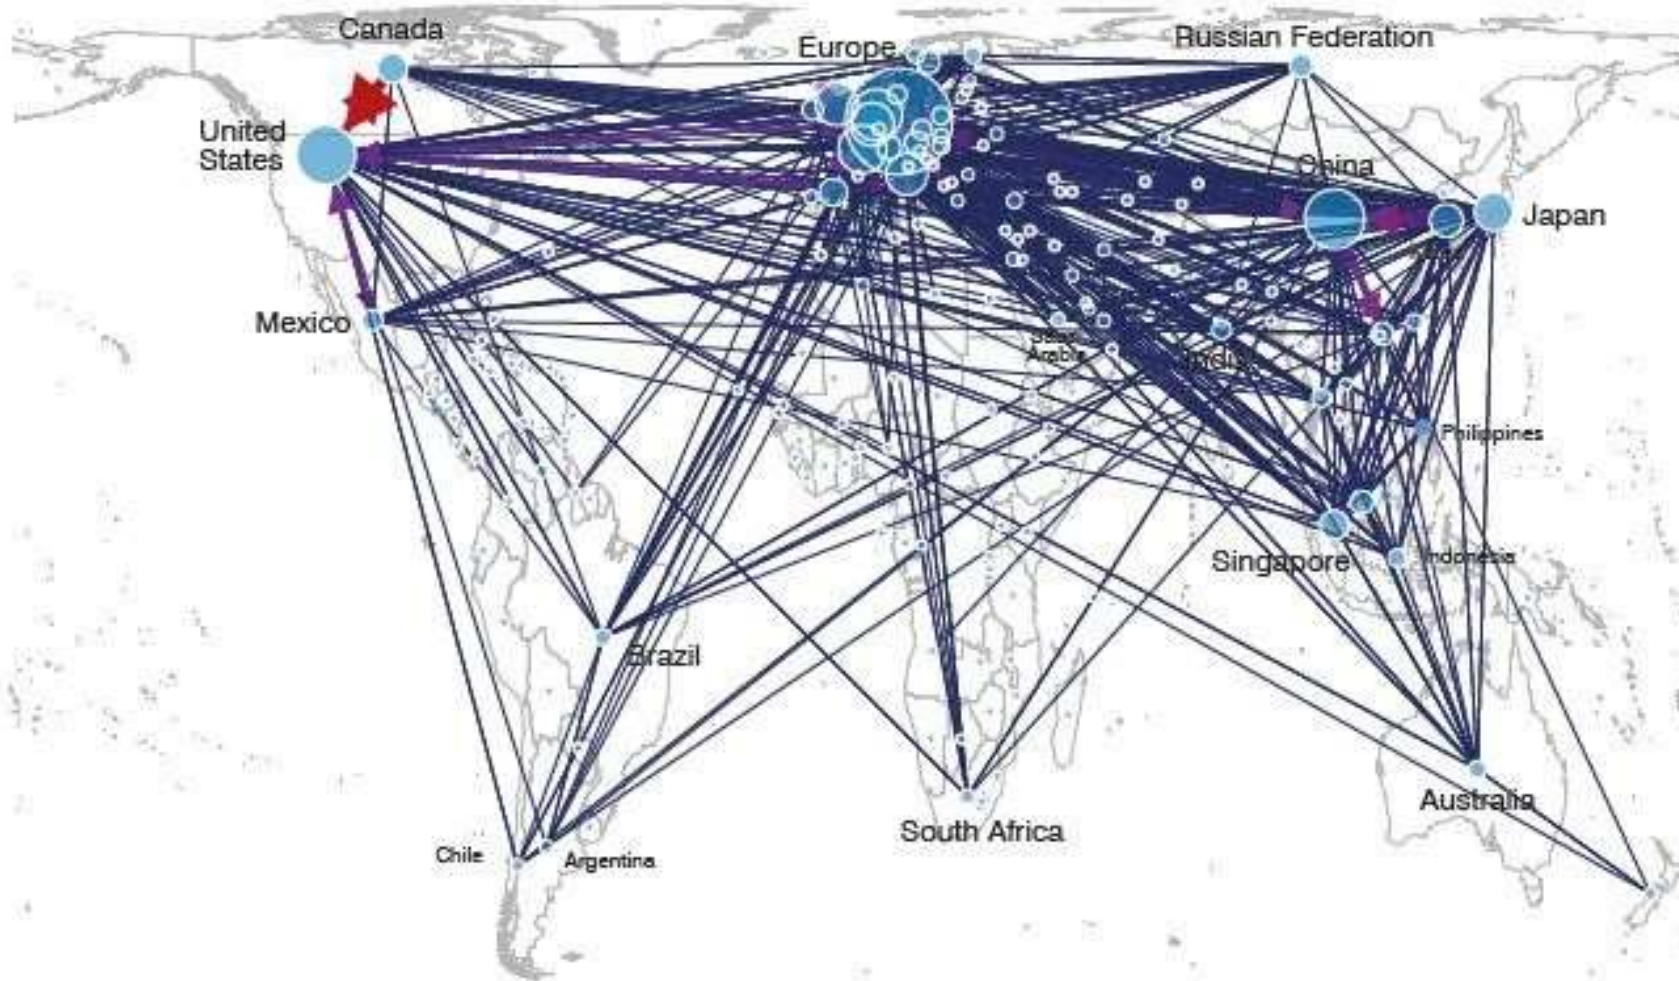

# National funding of cluster related projects in Germany

# GLOBALIZATION

# Value chain trade worldwide

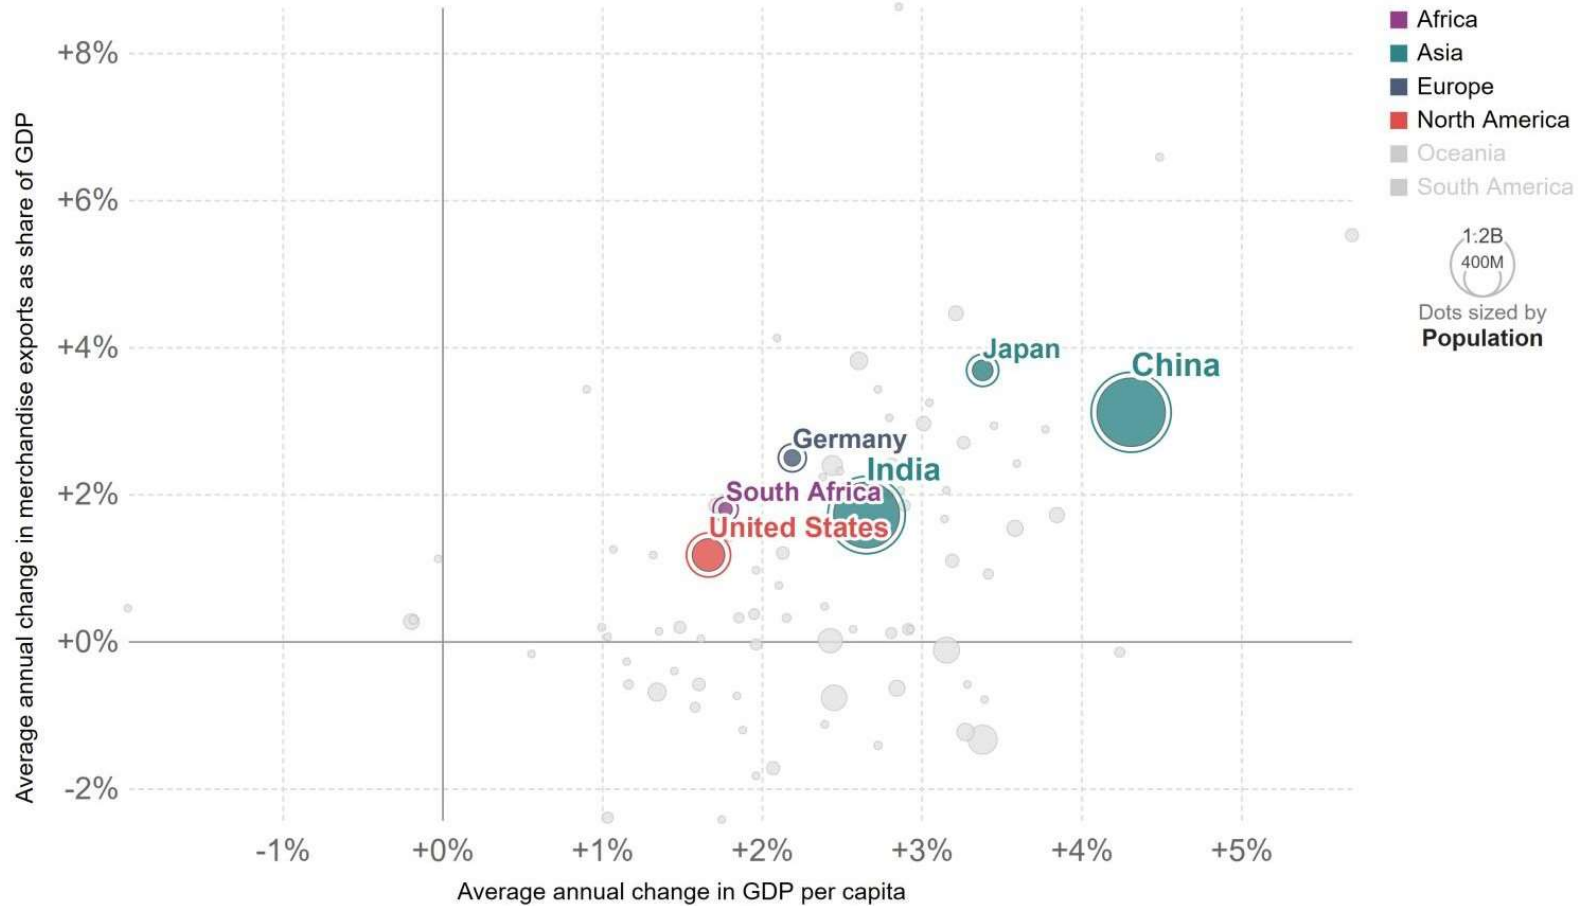

Source: <https://voxeu.org/article/value-chain-activity-age-changing-trade-alliances>

# Correlation between trade and growth

## Growth of GDP and trade, 1945 to 2014

Average annual change in real GDP per capita vs Average annual change in exports as share of GDP.

Our World in Data

# **CAN REGIONAL CLUSTERS BE VIEWED IN ISOLATION FROM THE GLOBALIZATION TREND?**

# Local buzz and global pipelines

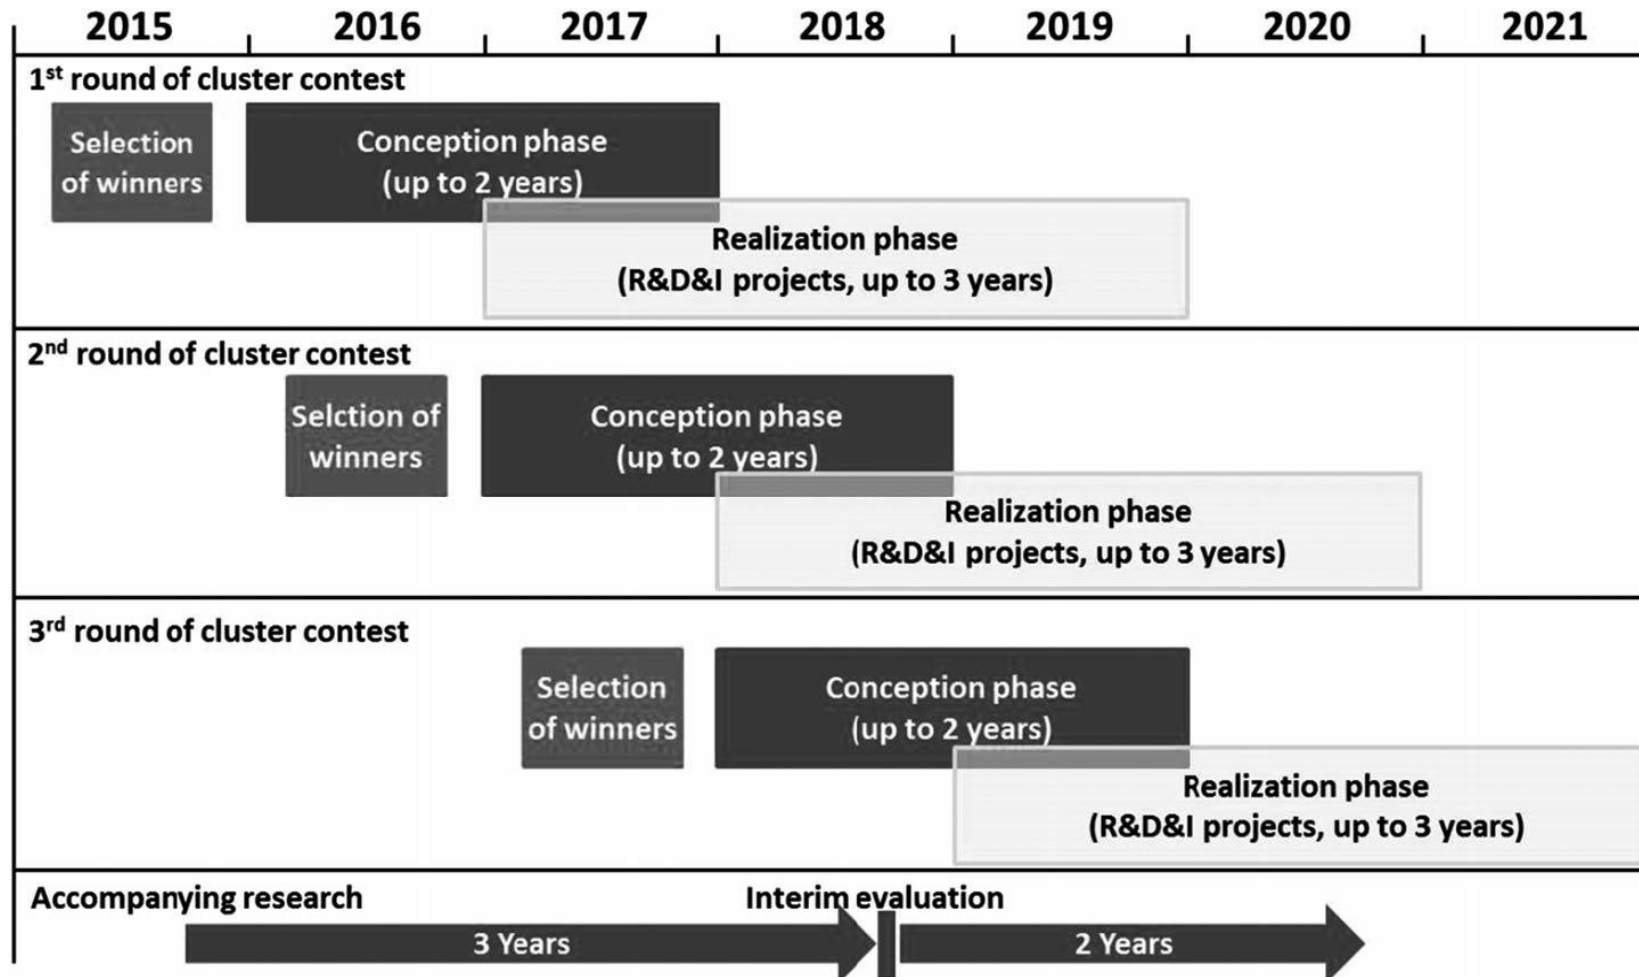

- Innovation is the result of a combination of internal as well as **external knowledge** (e.g. Hervás-Oliver & Sempere-Ripoll, 2014)
- Concept of **local buzz and global pipelines** by Bathelt et al. (2004)

# InterSpiN

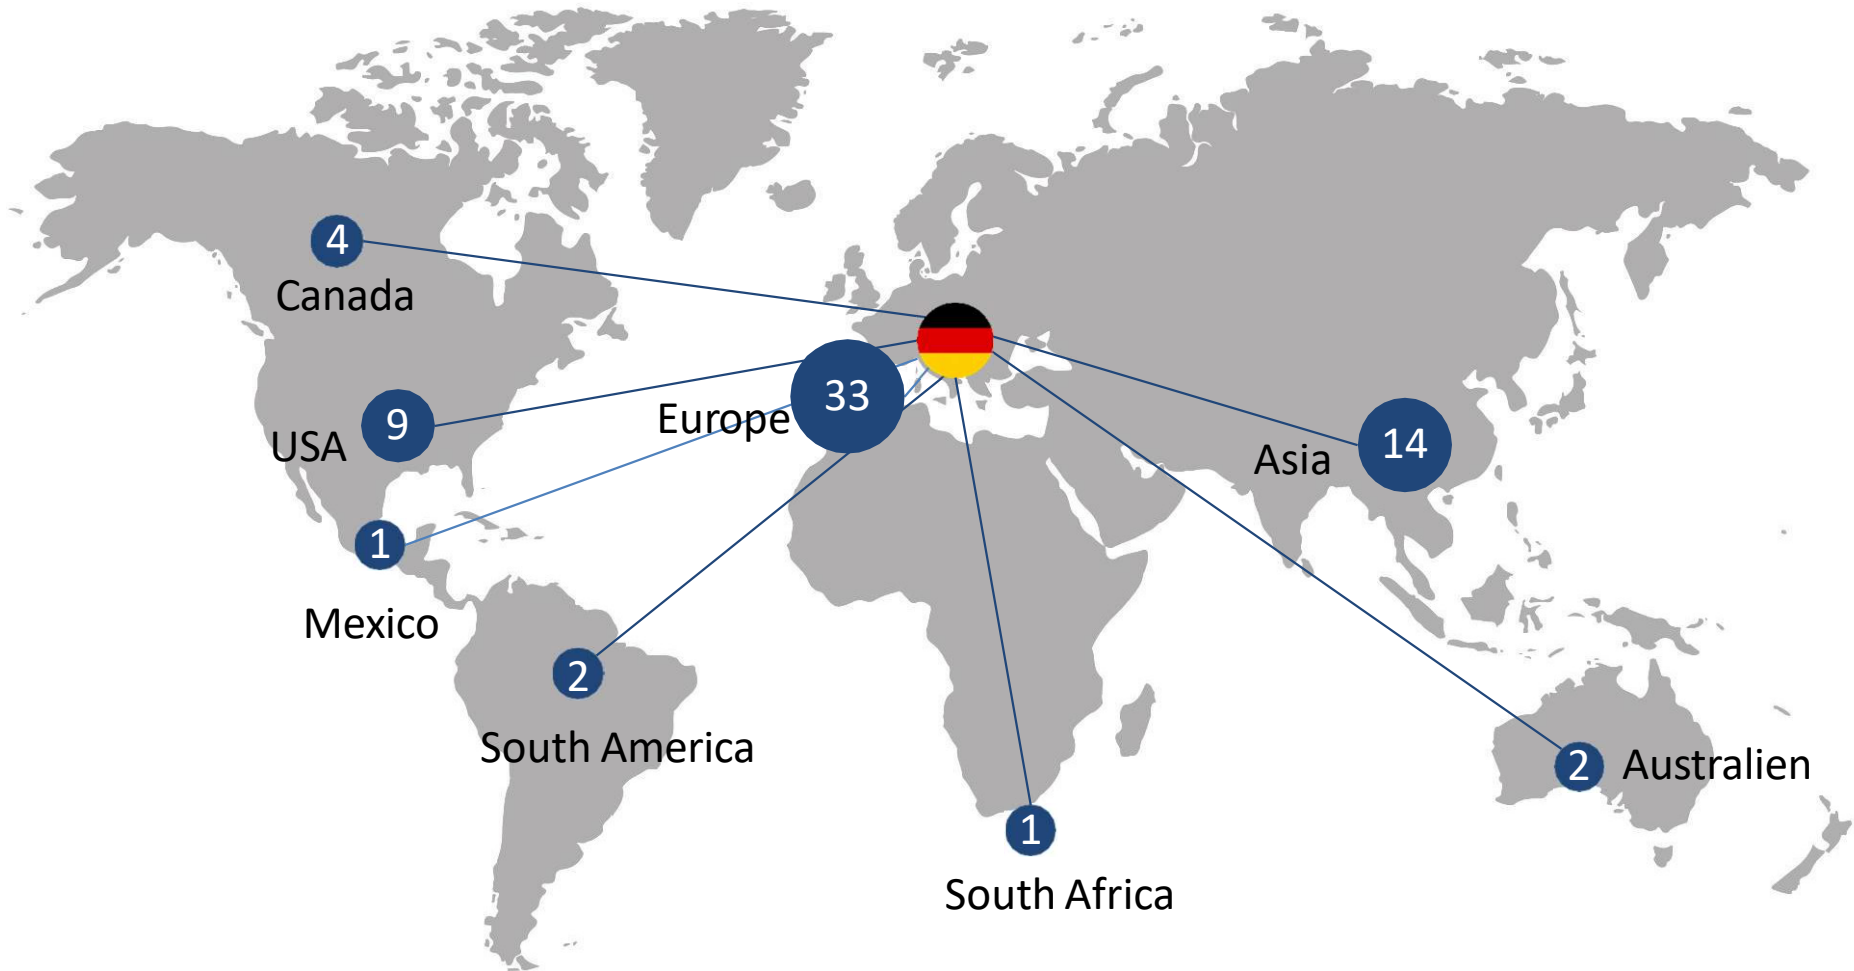

- Effects of **supraregional** collaborations of clusters, e.g.
  - For small clusters with a poor knowledge base, external linkages are key for improving their performance (Morrison et al. 2013)
  - Clusters are able to link to excellent research partners abroad (Fornahl et al. 2015)
- ‚Internationalization of Leading-edge Clusters, Future concepts and Networks‘ (**InterSpiN**)
  - Supports German clusters/networks in advancing their cooperation with international partners in the field of R&D (Dohse et al., 2018)
  - Funded by the Federal Ministry of Education and Research (BMBF)

# InterSpiN – Policy Design

Source: Dohse et al. 2018

# International links within InterSpiN

# Data

- Accompanying research of the policy initiative (<https://interspin.de/en/start/>)

- Main quantitative/qualitative data sources:
  1. **Organisational survey** (two waves for the first and second round)
  2. **Monitoring of the cluster managements** (incl. personal/phone interviews and quantitative query)

# Relevance of funding in clusters

Businesses need government support to overcome barriers to internationalisation

Source: InterSpiN Organisational survey

# Benefits for companies through

■ 2. Welle (N = 91) ■ 1. Welle (N = 416)

Source: InterSpiN Organisational survey

# Benefits for cluster/network through cluster/network internationalisation

■ Realisierte Vorteile (N = 104) ■ Erwartete Vorteile (N = 522)

Source: InterSpiN Organisational survey

# Interim summary – Benefits & Policy funding in general

- Policy support appears to be necessary to overcome internationalization barriers
- Advantages are different, however in general...
  - firms experience **improved access to information and (international) networks**
  - clusters/networks experience **increasing international visibility and reputation** as well as **increasing knowledge access**

# National and international partners

1. Funding round

■ deutsche Partner ■ internationale Partner

2. Funding round

■ deutsche Partner ■ internationale Partner

3. Funding round

■ deutsche Partner ■ internationale Partner

# Partner selection: Previous experience

## Comparison: Previous experience with cooperation partners

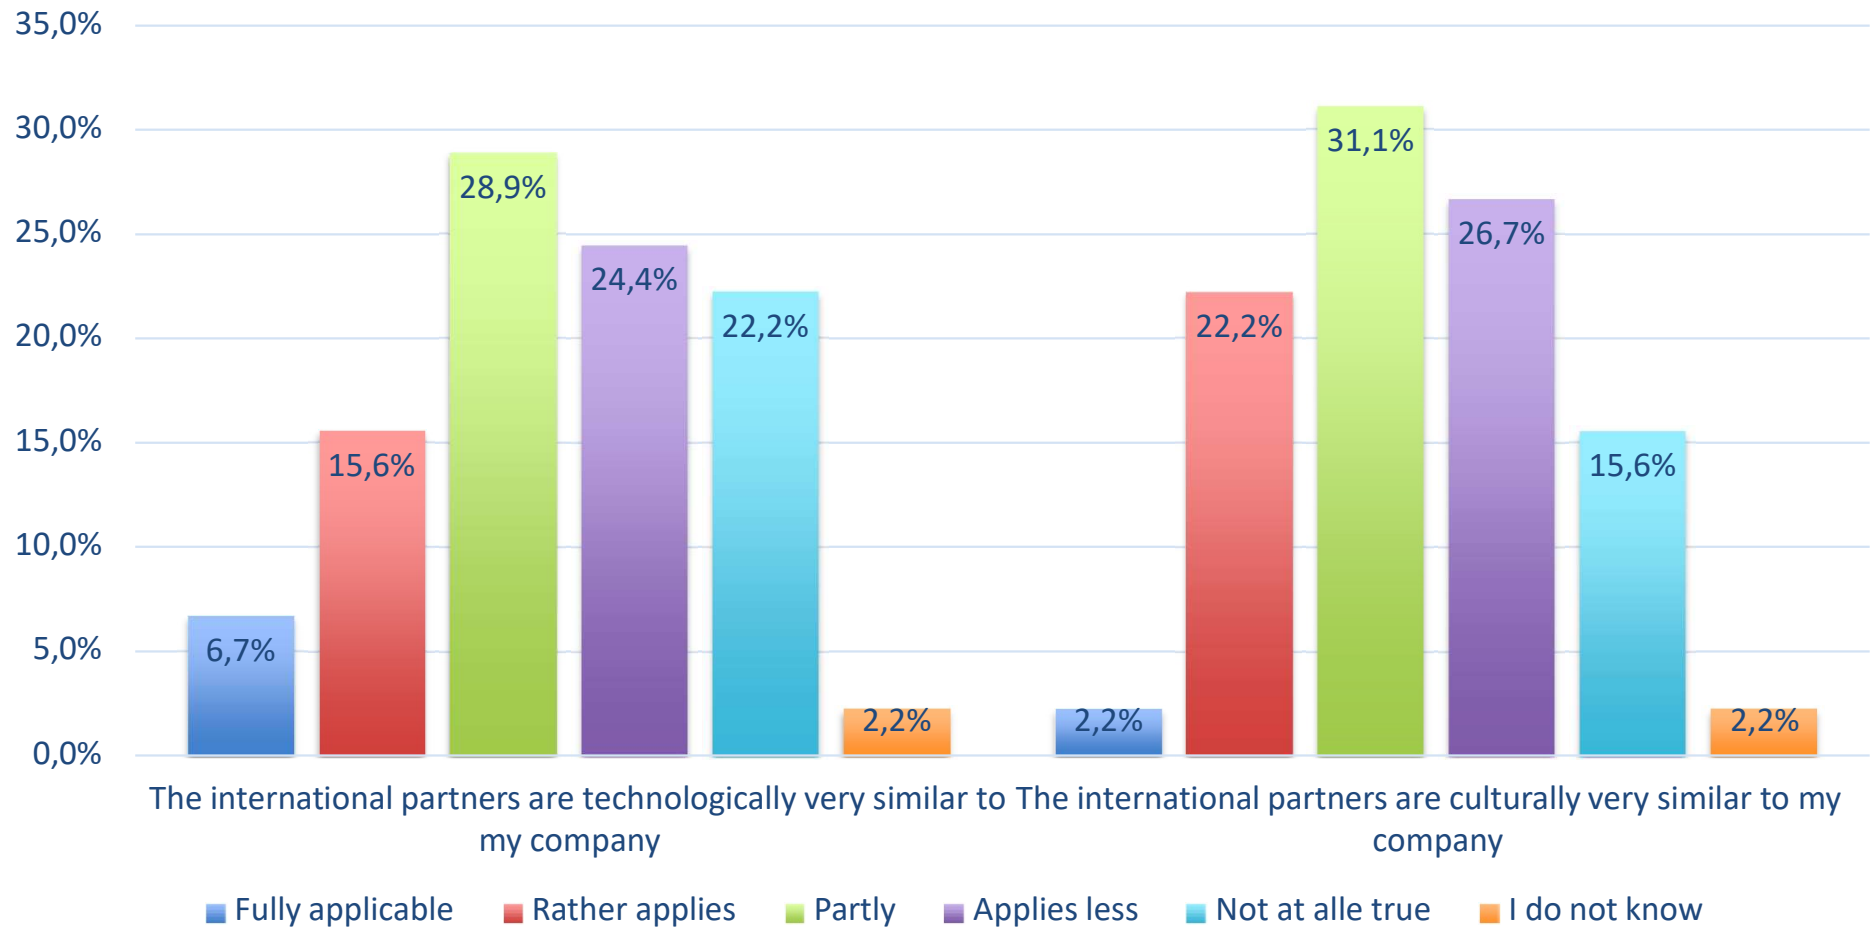

Source: InterSpiN Organisational survey

# Literature

- Actors need a certain technological distance to benefit from new knowledge for innovation processes (Nooteboom et al. 2007)
  - Company and university (Belderbos et al. 2004)
  - Industry A and Industry B (Corradini & De Propris 2017)
  - Region A and Region B (Singh 2008)
  - Cluster A and Cluster B (Janssen & Frenken 2019)

# Partner selection: Technological/cultural proximity

## Choice of international partners - technological & cultural proximity

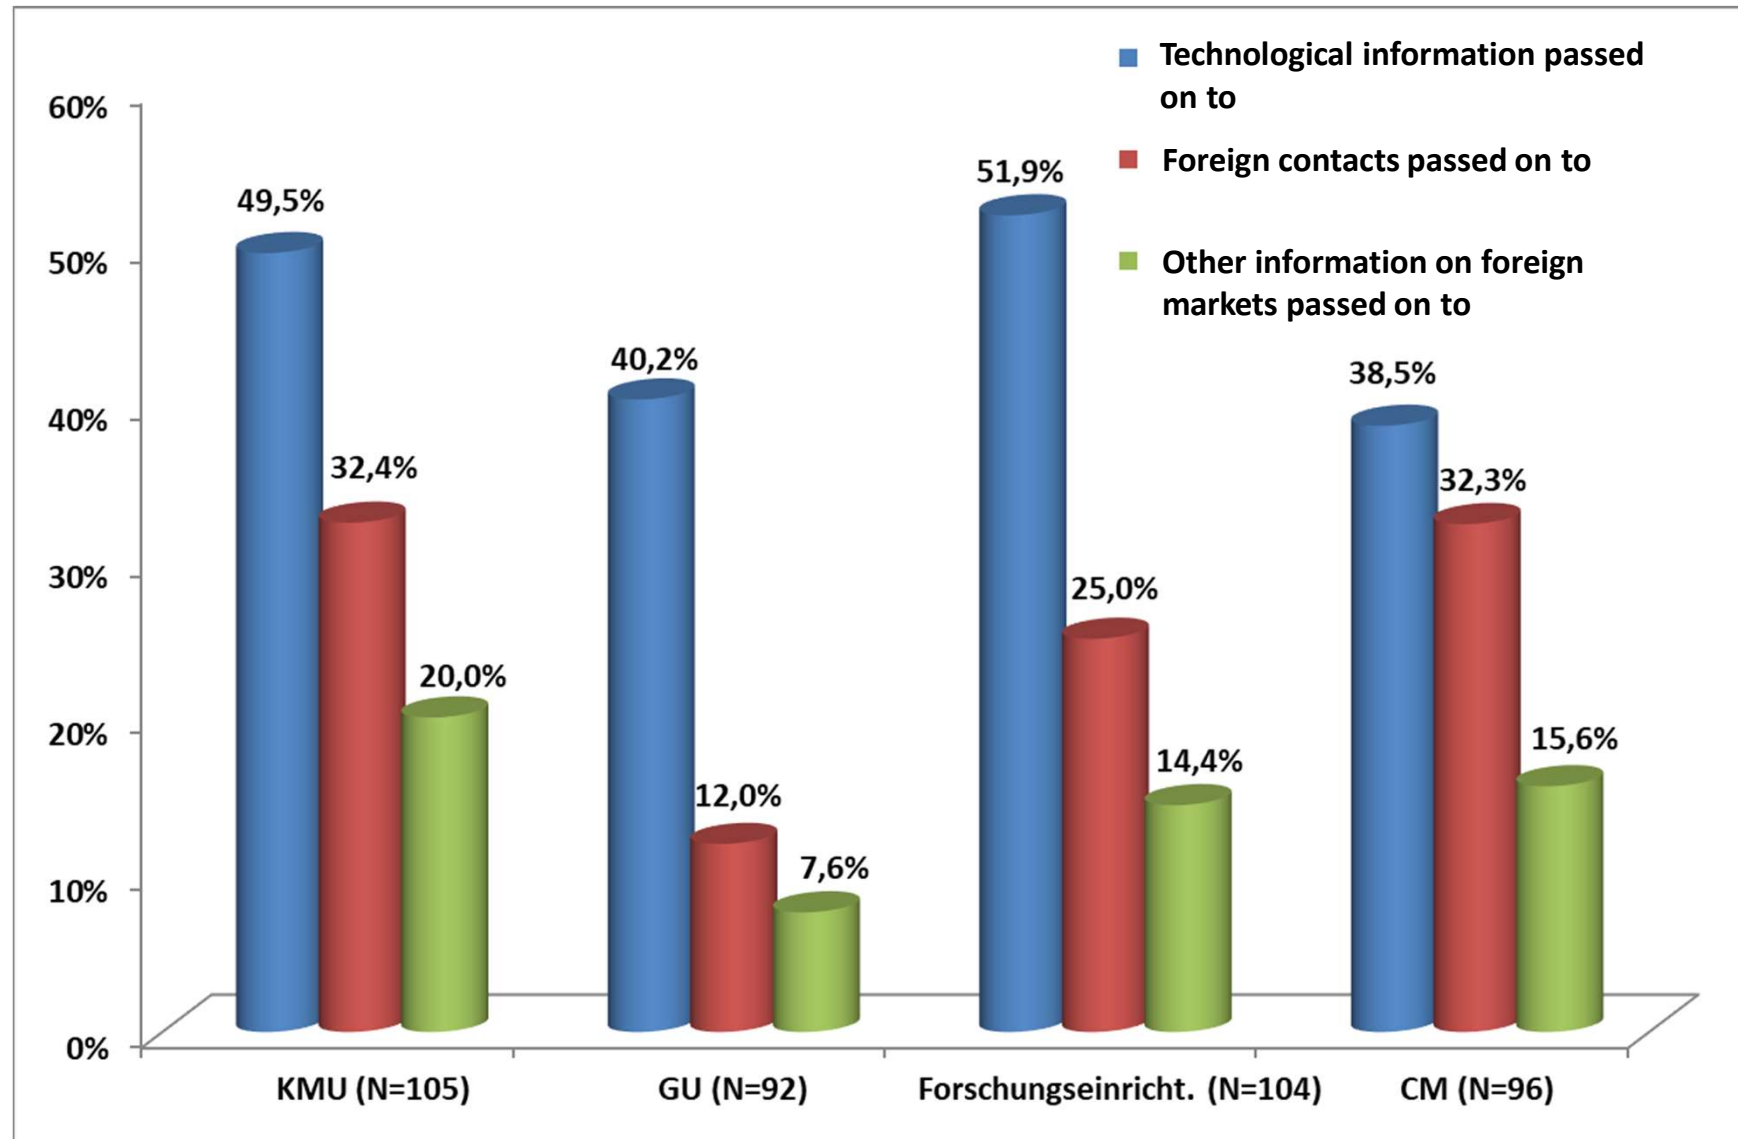

Source: InterSpiN Organisational survey

## Interim summary – Partner selection

- In the course of the funding measure, it was possible to establish...
  - mainly new international relationships with new partners
  - and at the same time strengthen national or regional relationships with already known partners
- Partner selection not on the basis of possible counterpart funding, but on the basis of thematical fit

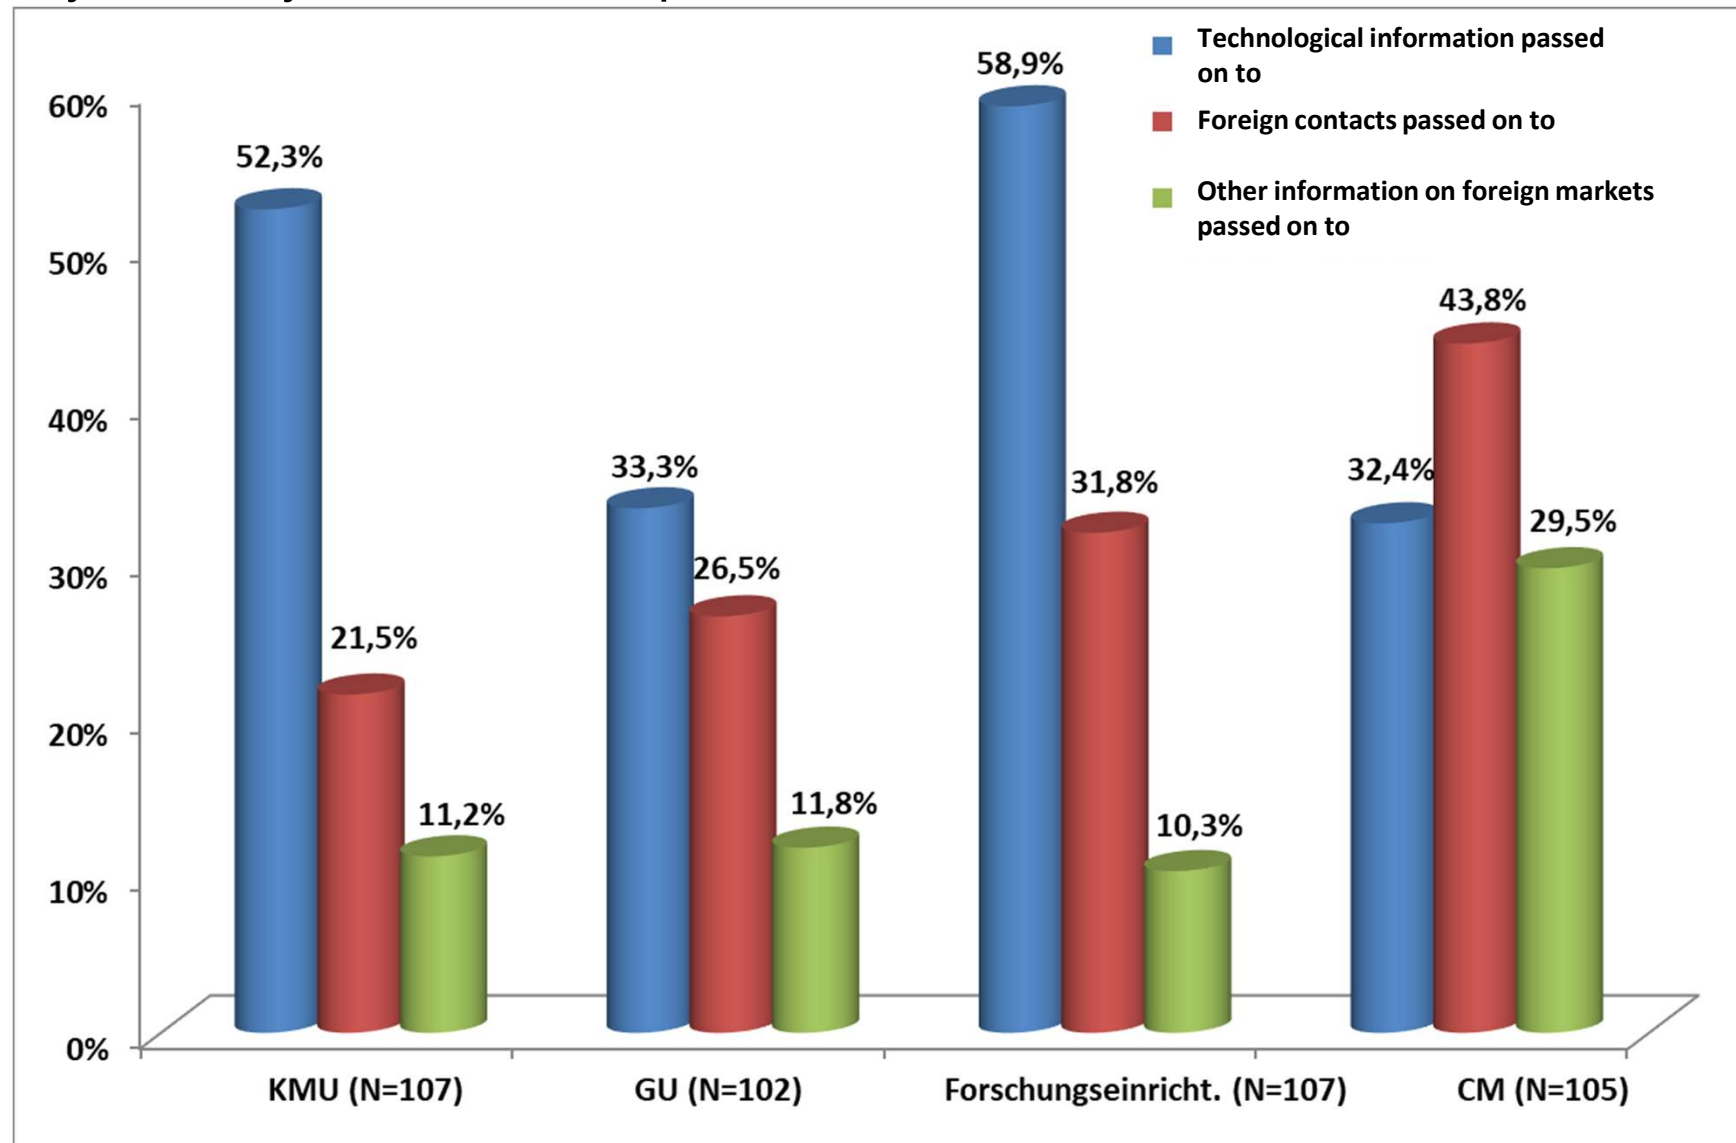

In the course of the internationalization of your cluster/network, have you made information available to other actors from the cluster/network in the past three years? If yes, on which topics and to which actors?

Source: InterSpiN Organisational survey

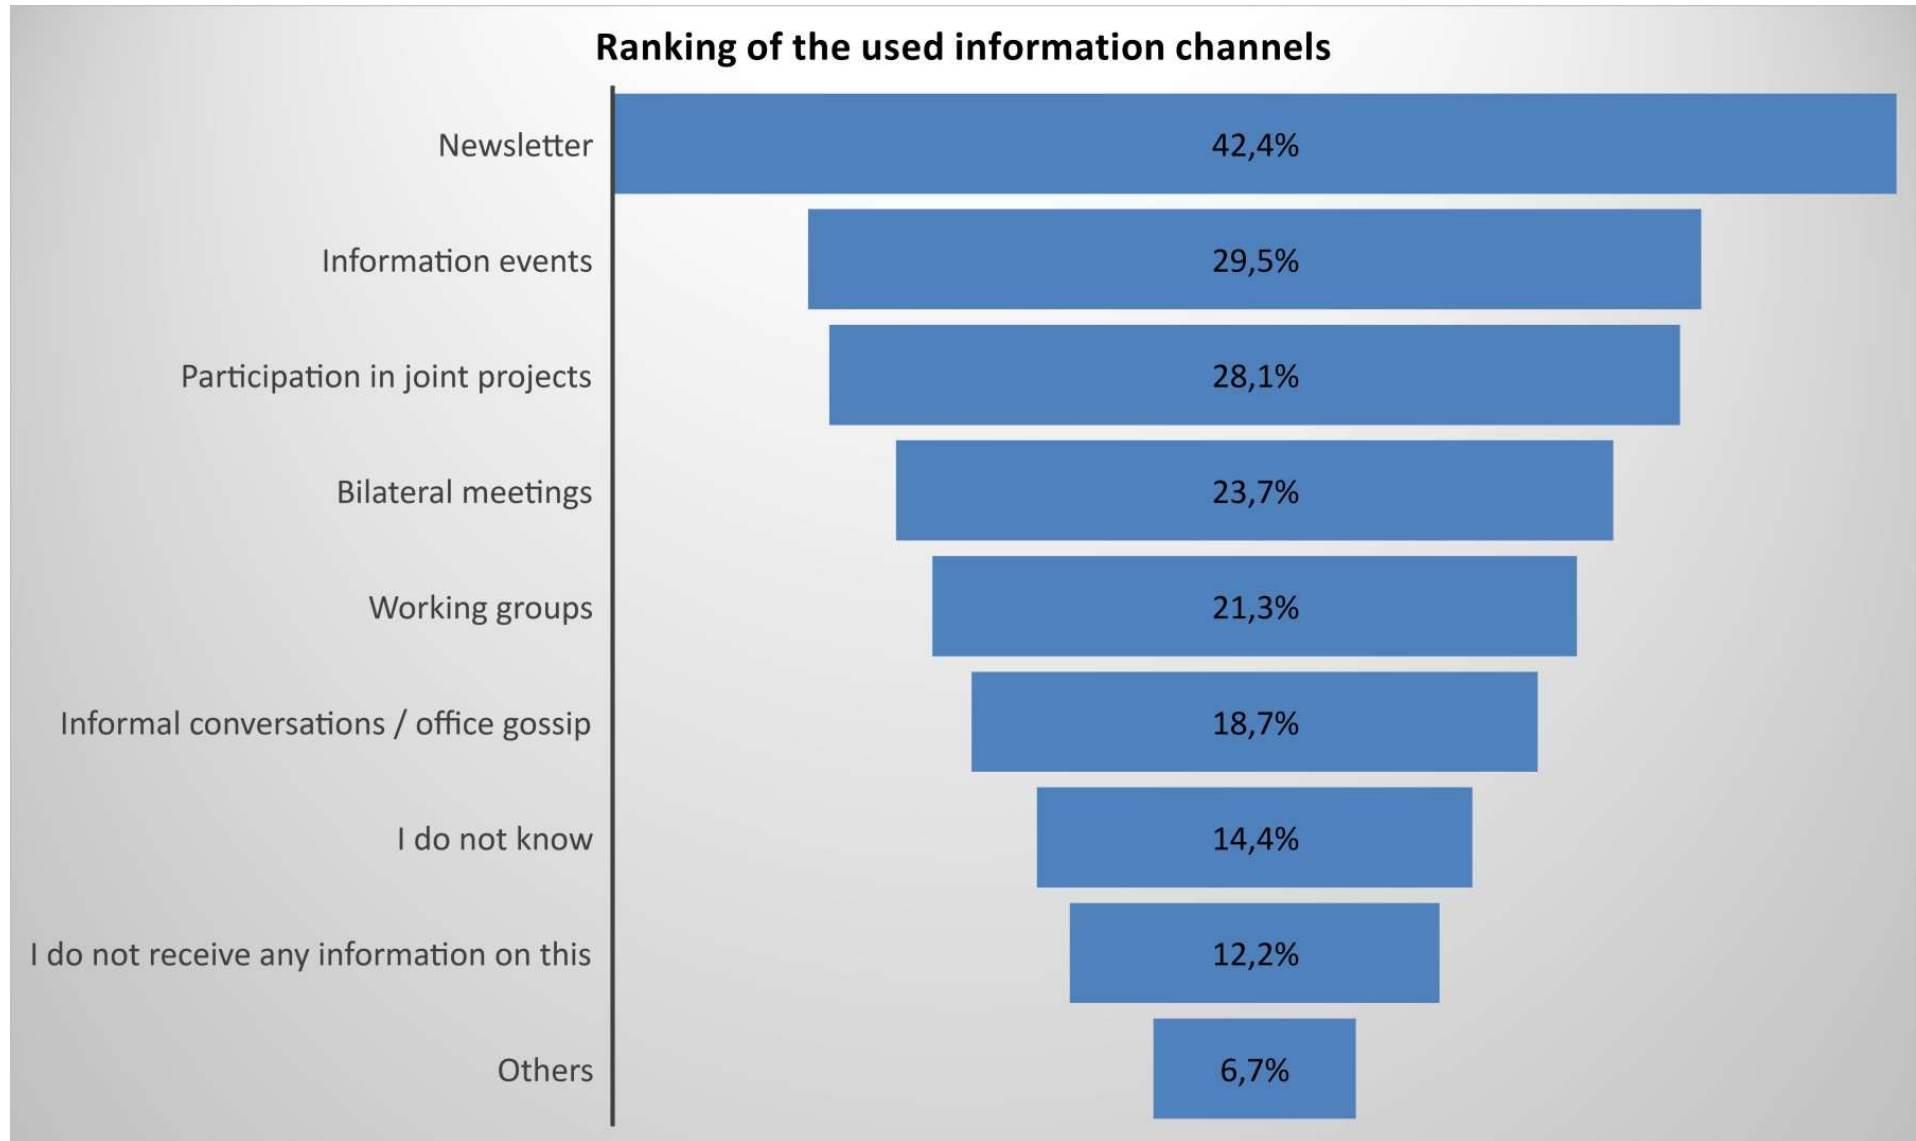

In the course of the internationalization of your cluster/network, have you received information from other actors in the cluster/network in the past three years? If yes, on which topics and from which actors?

Source: InterSpiN Organisational survey

# Used information channels in the implementation phase of the collaborative projects

Source: InterSpin Organisational survey

## Interim summary – Information and knowledge diffusion

- SMEs across all types of information channels benefit particularly from information sharing by other cluster/network actors.
- SMEs, research institutions and cluster management have a special diffusion function for the clusters/networks
- No universal information channel

# Conclusion

- InterSpiN is a pioneering approach that aims to combine localization and international advantages
  - Especially in specialised regions, build supra-regional relationships
- There is not a one-size-fits all approach, but the internationalization strategy should be cluster-specific and actor-specific
  - Partner selection
  - Information and knowledge diffusion
- Promising role of cluster management to support the internationalization process (e.g. through international delegation trips and/or workshops)
